

November 4, 2019

Ms. Kirsten Walli, Board Secretary Ontario Energy Board P.O. Box 2319 2300 Yonge Street 27<sup>th</sup> Floor Toronto, ON M4P 1E4

Re: Milton Hydro Distribution Inc. ED-2003-0014
OEB File No. EB-2019-0053
2020 IRM Rate Application

Please find enclosed an electronic copy of Milton Hydro's Managers Summary for its 2020 IRM Rate Application; the completed 2020 IRM Rate Generator Model – V1.1 in Excel; the GA Analysis Workform Appendix A; and the Certification of Evidence required for rates effective May 1, 2020. Two hard copies of the Application will follow by courier under separate cover.

Yours truly,

Original Signed

Cameron McKenzie CPA, CGA Director, Regulatory Affairs Milton Hydro Distribution Inc. **IN THE MATTER OF** the Ontario Energy Board Act, 1998, being Schedule B to the Energy Competition Act, 1998, S.O. 1998, c.15;

**AND IN THE MATTER OF** an Application by Milton Hydro Distribution Inc. to the Ontario Energy Board for an Order or Orders approving or fixing just and reasonable rates and other service charges for the distribution of electricity as of May 1, 2020.

MILTON HYDRO DISTRIBUTION INC. ("Milton Hydro")

# APPLICATION FOR APPROVAL OF 2020 ELECTRICITY DISTRIBUTION RATES EB-2019-0053

#### **MANAGER'S SUMMARY**

Filed: November 4, 2019

Cameron McKenzie, CPA, CGA

#### APPLICATION FOR APPROVAL OF 2020 ELECTRICITY DISTRIBUTION RATES

#### 2 MANAGER'S SUMMARY

^	<b>^</b> 4		4			
-2	< 1	m	rro	~1	ICT	ınn
3	<b>3.1</b>		LI U	u	ucti	U

1

- The Applicant is Milton Hydro Distribution Inc. ("Milton Hydro"). Milton Hydro is a corporation incorporated pursuant to the *Ontario Business Corporations Act* with its head office in the Town of Milton. Milton Hydro carries on the business of distributing electricity within the Town of Milton and contiguous distributors as set out in Schedule 1 of its Electricity Distribution Licence ED-2003-0014.
- 9 (b) Milton Hydro hereby applies to the Ontario Energy Board (the "OEB") pursuant to 10 section 78 of the *Ontario Energy Board Act*, 1998 as amended (the "OEB Act") for 11 approval of its proposed distribution rates and other charges, effective May 1, 2020.
- 12 (c) Milton Hydro is applying for a 2020 rate adjustment under the 4th Generation 13 Incentive Regulation Mechanism ("IRM").
- 14 (d) Milton Hydro has followed the instructions provided in Chapter 3 of the Filing
  15 Requirements for Electricity Distribution Rate Applications 2018 Edition for 2019
  16 Rate Applications ("the Filing Requirements") issued July 12, 2018; the Report of
  17 the Board on Electricity Distributors' Deferral and Variance Account Review Initiative
  18 ("the EDDVAR Report") issued July 31, 2009; and the Electricity Distribution Retail
  19 Transmission Service Rates Guideline G-2008-0001, Revision 4.0, issued June 28,
  20 2012 ("RTSR Guidelines").
- 21 (e) Milton Hydro has verified the accuracy of the billing determinants that were pre-22 populated in the models.
- 23 (f) Milton Hydro has completed the 2020 IRM Rate Generator Model which is filed in both Excel and Adobe PDF format.
- 25 (g) Milton Hydro has completed the GA Analysis Workform Appendix A fn Appendix E
- 26 (h) Milton Hydro's total Group 1 Deferral and Variance Account balance does not meet 27 the EDDVAR threshold for disposition, as such Milton Hydro has not filed a Global 28 Adjustment Analysis Workform or an Account 1595 Workform.

Milton Hydro Distribution Inc. EB-2019-0053 2020 IRM Electricity Distribution Rate Application Filed: November 4, 2019 Page 3 of 19

1 2	(i)	Milton Hydro transitioned to the fully fixed monthly distribution charge for the Residential customer class in it's 2019 Rate Application.
3 4 5	(j)	All customer classes will have rates adjustment by the same percent being 1.05%. The customers in the low 10% range using 375 kWh per month will see a rate increase of 1.05%.
6 7	(k)	Milton Hydro has provided a copy of its Approved 2019 Tariff of Rates and Charges as Appendix B and its proposed 2020 Tariff of Rates and Charges as Appendix C.
8 9 10	(1)	Milton Hydro has provided additional information in its 2020 Electricity Distribution Rate Application ("the Application") where Milton Hydro has determined that such information may be useful to the OEB.
11 12	(m)	Milton Hydro has provided the Certification of Evidence – Mary-Jo Corkum, Vice President Finance, as Appendix A.
13 14	(n)	Milton Hydro will post its 2020 IRM Application and related information as require by the OEB on its website <a href="https://www.miltonhydro.com">www.miltonhydro.com</a> .
15 16	Delegat	ed Authority
17 18 19	Milton H	ydro is requesting its Application to be heard by an OEB staff person to whom the OEB gated its adjudicative powers and duties under section 6 of the Ontario Energy Board 8, (the "Act") and further that this employee may exercise their delegated powers and
20		nder section 6(4) of the Act and proceed without a hearing.

17	Previous OEB	Decisions
18	Milton Hydro doe	s not have any outstanding issued from previous OEB Decisions.
19		
20	3.2 Propose	ed Distribution Rates and Other Charges
21	3.2.1 Price Ca	p Adjustment
22 23	•	applied the GDP-IPI Price Cap Adjustment of 1.20% less the Productivity Factor on Hydro's Stretch Factor of 0.15%, as provided in the Pacific Economic Group
24		o the Ontario Energy Board dated August 15, 2019, resulting in a Price Cap Index
25		customers. Milton Hydro understands that the 1.20% is a reasonable estimate
26		y adjustment to input prices and that this percent may be adjusted accordingly
27		n publication of the most current GDP-IPI by Statistics Canada.
28		
29	3.2.1.1 A	pplication of the Annual Adjustment Mechanism
30 31	-	stment mechanism will apply to distribution rates (fixed and variable charges) customer rate classes.

Milton Hydro Distribution Inc. EB-2019-0053 2020 IRM Electricity Distribution Rate Application Filed: November 4, 2019 Page 5 of 19

1 The annual adjustment mechanism will not be applied to the following components of delivery 2 rates: 3 Rate Adders Rate Riders 4 5 Low Voltage Service Charges Retail Transmission Service Rates 6 7 Wholesale Market Service Rate Rural and Remote Rate Protection Benefit and Charge 8 9 Standard Supply Service – Administrative Charge Capacity Based Recovery 10 11 MicroFIT Service Charge 12 Specific Service Charges 13 Transformation and Primary Metering Allowances 14 **Smart Metering Entity Charge** 15 16 3.2.2 Revenue to Cost Ratio Adjustment 17 Milton Hydro is not proposing to adjust the revenue-to-cost ratios and therefore has not completed 18 the 2020 IRM Revenue to Cost Ratio Adjustment Model. 19 3.2.3 Rate Design for Residential Customers 20 21 Milton Hydro transitioned to the 100% fixed monthly distribution charge for the Residential customer class in it's 2019 IRM Rate Application. 22 23 24 3.2.4 Proposed Retail Transmission Service Rates 25 Milton Hydro has populated Tab 10. RTSR Current Rates with data from Milton Hydro's 2018

RRR filing and its Loss Factor as approved in Milton Hydro's 2016 Cost of Service Rate

Application. There are no rate classes that have more than one Network or Connection charge.

26

27

- 1 The Transmission Network and Connection rates included in TAB 11. RTSR UTRs & Sub-Tx of
- 2 the model are those rates charged by the Independent Electricity System Operator ("IESO") for
- 3 2018 and 2019; Hydro One Networks Inc. ("Hydro One") for 2018, January 1 to June 30, 2019,
- 4 and July 1 to December 31, 2019; and Oakville Hydro Electricity Distribution Inc. ("Oakville
- 5 Hydro") OEB-Approved rates for 2019.
- 6 Milton Hydro has updated the 2020 IRM Rate Generator Model, Tab12. RTSR Historical
- 7 Wholesale, with the billing detail for wholesale transmission from the IESO, Hydro One and
- 8 Oakville Hydro.
- 9 The following Table 1 sets out Milton Hydro's current approved RTSRs and the proposed RTSRs
- 10 effective May 1, 2020

Table 1

Existing 2019 and Proposed 2020 Retail Transmission Service Rates

Customer Class	\$/Unit	2019 Approved		2020 Proposed	
		Network	Connection	Network	Connection
Residential	\$/kWh	0.0071	0.0062	0.0074	0.0065
General Service Less Than 50 kW	\$/kWh	0.0065	0.0055	0.0067	0.0058
General Service 50 to 999 kW	\$/kW	2.9093	2.5283	3.0175	2.6507
General Service 1,000 to 4,999 kW	\$/kW	2.8613	2.4871	2.9677	2.6075
Large Use	\$/kW	3.0985	2.7814	3.2137	2.9161
Unmetered Scattered Load	\$/kWh	0.0065	0.0055	0.0067	0.0058
Sentinel Lighting	\$/kW	1.9806	1.7365	2.0542	1.8206
Street Lighting	\$/kW	1.9704	1.7007	2.0437	1.7831

13 14

15

16

17

18

Milton Hydro understands that in the event the Uniform Transmission Rates ("UTR") or Oakville Hydro's transmission rates change effective January 1, 2020, OEB staff will adjust the 2020 IRM

Rate Generator Model accordingly to reflect the impacts of any changes in the UTR on Milton

Hydro's proposed RTSRs.

19

20

21

22

#### 3.2.5 Proposed Group 1 Deferral and Variance Account Disposition

Milton Hydro has completed the Deferral and Variance Account continuity schedule included in the 2020 IRM Rate Generator Model at Tab 3. Continuity Schedule for Milton Hydro's Group 1

Milton Hydro Distribution Inc. EB-2019-0053 2020 IRM Electricity Distribution Rate Application Filed: November 4, 2019

Page 7 of 19

1 Deferral and Variance Accounts. Milton Hydro filed an Incentive Regulation Rate Application for 2 rates effective May 1, 2019 which included the disposition of its December 31, 2017 Deferral and 3 Variance Account balances therefore Milton Hydro's continuity schedule begins with the 2017 4 closing balances. 5 Milton Hydro's USofA 1595 (2014), 1595 (2016) and 1595 (2017), which have an end date of April 6 30, 2020 will not be disposed of until Milton Hydro files its 2023 Rate Application in accordance 7 with the OEB direction provided in question 3 of the Q&A issued August 7, 2019 on the GA and 8 1595 Workform. 9 Milton Hydro's Group 1 Deferral and Variance Account balances in this 2020 IRM Application total 10 a debit of \$465,532 equivalent to \$0.0005 per kWh, as calculated at Tab 4. Billing Det. for Def-11 Var in the 2020 IRM Rate Generator Model. The Threshold Test calculation outlined in the EDDVAR Report is +/- \$0.001 per kWh. Milton Hydro's total Group 1 Deferral and Variance 12 13 Account balances do not meet the threshold test and Milton Hydro has not elected to dispose of 14 the Group 1 balances. 15 Milton Hydro had five customers transition between Class A and Class B in 2018. As Milton 16 Hydro's Group 1 balances do not meet the threshold test and Milton Hydro has not elected to 17 dispose of its Group 1 accounts these five customers will have the Global Adjustment and 18 Capacity Base Recovery transitional rate riders calculated in a future rate application. 19 The following Table 2 provides and explanation the variances identified in the Rate Generator 20 model on the Tab 3. Continuity Schedule. 21 22 23 24 25 26

Milton Hydro confirms that all year end balances agree, except as explained above, in total with

both its annual filings required under the RRRs and with Milton Hydro's annual audited financial

statements for 2018. No Adjustments to previously approved balances on a final basis have been

made.

Milton Hydro has not completed the Account 1595-Workform as there are no 1595 accounts being

10 disposed of.

11

12

14

16 17

#### 3.2.5.1 Wholesale Market Participants

13 Milton Hydro has two wholesale market participants ("WMP") that participate directly in the

Independent Electricity System Operator ("IESO") administered market. Milton Hydro does

15 not allocate balances to WMP customers from USoA 1580 RSVA - Wholesale Market

Services Charge, USoA 1580 Variance WMS, Sub-Account CBR Class B, USoA 1588 RSVA

- Power, and USoA 1589 RSVA - Global Adjustment.

Milton Hydro Distribution Inc. EB-2019-0053 2020 IRM Electricity Distribution Rate Application Filed: November 4, 2019 Page 9 of 19

- 1 Milton Hydro also ensures that rate riders are appropriately calculated for the following
- 2 remaining charges that are still settled with the Wholesale Market Participants. These include
- 3 USoA 1584 RSVA Retail Transmission Network Charge, USoA 1586 RSVA Retail
- 4 Transmission Connection Charge and USoA 1595 Disposition/Refund of Regulatory
- 5 Balances.

6

8

#### 7 3.2.5.2 Global Adjustment

#### Class B and A Customers

- 9 Milton Hydro's non-RPP Class B customers are billed using the IESO's Global Adjustment First
- 10 (1st) Estimate. The billed amounts are tracked in USoAs 4006-4055 depending on customer
- 11 classifications.
- 12 The actual GA amount Milton Hydro is billed by the IESO to service non-RPP Class B customers
- 13 is tracked in USoA 4707.
- 14 The GA variance account USoA 1589 RSVA Global Adjustment captures the difference
- between the amounts billed to the non-RPP customers on 1st Estimate and the actual amount
- 16 paid by Milton Hydro to the IESO for non-RPP customers. Milton Hydro confirmed in its Response
- 17 to 2019 OEB staff interrogatory 3 that the entire CT 148 charge is initially recorded to account
- 18 4707. The portion of the monthly RPP settlement related to GA RPP is also credited to account
- 19 4707. The net result is that only GA Non-RPP expense is left in account 4707. Any variance
- 20 between the GA Non-RPP billed to customers and the GA Non-RPP expense is then recorded to
- 21 account 1589.
- 22 Milton Hydro uses accrual accounting. At year end, unbilled entries are based on actual amounts
- 23 billed. Year end is kept open until all consumption is billed in January and February and then
- journalized into the appropriate year. This entry is reversed in the following year.
- 25 As provided in the OEB staff review of Appendix A of the GA Methodology Description [OEB
- 26 staff-4 a], Milton Hydro confirms that settlement with the IESO is based on actual billed
- 27 consumption as and the settlement the following month is the RPP Quantities billed in the
- 28 previous month trued up by applying the Actual GA rate. This is the difference between
- 29 the first GA Estimate and the actual GA rate using the previous months actual billed
- 30 consumption.

Milton Hydro Distribution Inc. EB-2019-0053 2020 IRM Electricity Distribution Rate Application Filed: November 4, 2019

Page 10 of 19

1 As provided in the OEB staff review of Appendix A of the GA Methodology Description [OEB

- 2 sraff-4 b] Milton Hydro also confirms that its monthly settlements with the IESO are performed
- 3 using actual **billed** consumption quantities for the previous month using the difference between
- 4 the first GA Estimate and the actual GA rate. The actual billed consumption for previous month
- 5 is available by the 4<sup>th</sup> day following the month-end.
- 6 In 2018 Milton Hydro changed its methodology to true up the Global Adjustment 1589 account for
- 7 the IESO Form 1598 in order to improve the accuracy of the balances in this account. Milton
- 8 Hydro now tracks and records the Global Adjustment for three prior months. At the end of 2018
- 9 Milton Hydro accrued November and December's true up from first estimate to actual global
- adjustment. By making this change Milton Hydro has a reconciling amount of \$759,410 credit in
- 11 the GA Analysis Workform to remove the true up for November and December 2017 included in
- 12 Milton Hydro's 2018 General Ledger year end balance for account 1589.
- 13 Class A customers are billed their share of the actual Global Adjustment, charged by the IESO,
- 14 based on their individual Peak Demand Factor and as such the balance in USoA 1589 RSVA -
- 15 Global Adjustment for Class A customers is zero.

#### **GA Analysis Workform**

- 18 Milton Hydro's total Group 1 Deferral and Variance Account balance does not meet the
- 19 EDDVAR threshold for disposition, as such Milton Hydro has not filed a Global Adjustment
- 20 Analysis Workform.
- 21 Milton Hydro did complete the GA Analysis Workform for internal purposed to ensure that it could
- 22 reconcile the balance to less than the 1% required. This provides Milton Hydro assurance that,
- 23 going forward in 2019 the expected GA calculation and the year end General Ledger balance are
- within the OEB tolerance of less than 1%.
- 25 Milton Hydro's reconciliation resulted in a difference of expected global adjustment to the IESO
- in the amount of \$40,500 or 0.2% which is less than the 1% deemed by the OEB to be material.

27

16

17

28

29

#### 1 3.2.5.3 Commodity Accounts 1588 and 1589

#### 2 Description of Settlement Process

#### 3 Commodity Accounts 1588 RSVA - Power and 1589 RSVA - Global Adjustment

- 4 Milton Hydro claims the difference between Regulated Price Plan ("RPP") rates applied to RPP
- 5 customers, and the sum of the corresponding billed consumption multiplied by the Weighted
- 6 Average Hourly Spot Price ("WAHSP") and Global Adjustment ("GA") in IESO Form (formerly
- 7 1598) each month.
- 8 This information is obtained from Milton Hydro's Customer Information System ("CIS") monthly
- 9 billing activity.
- 10 In the current IESO settlement month, Milton Hydro extracts RPP billed consumption and
- 11 commodity charges (TOU and tiered pricing) from our CIS system. Milton Hydro calculates in our
- 12 CIS system the WAHSP charges for this billed RPP consumption and adds the 1st Estimate GA
- 13 Charge which is applied to the billed RPP consumption. The amount settled with the IESO is the
- 14 difference between the sum of the WAHSP and GA calculation minus the billed RPP commodity
- 15 (TOU and tier pricing).
- Milton Hydro submits a GA true up each month. This monthly true up is based on the prior months
- 17 RPP billed consumption multiplied by the difference between the Actual GA charge for the month
- 18 minus the 1<sup>st</sup> Estimate charge originally submitted to the IESO.
- 19 The RPP portion of the Global Adjustment is reflected in Account 1588 RSVA Power.
- 20 The non-RPP portion of the Global Adjustment is reflected in Account 1589 RSVA Global
- 21 Adjustment.
- 22 The RPP Settlement true up claim that is made in January 2019 pertaining to December 2018
- 23 portion of the Global Adjustment has been journalized into 2018 and reflected in Account 1588
- 24 RSVA Power.

25

#### 26 Renewable Energy Standard Offer Program (RESOP) Settlement Amount

- 27 Milton Hydro has two customers under the RESOP program. Each month, the associated
- 28 generation/activity multiplied by the hourly HOEP price less the actual RESOP contract rate is
- 29 settled with the IESO.

Milton Hydro Distribution Inc. EB-2019-0053 2020 IRM Electricity Distribution Rate Application

Filed: November 4, 2019

Page 12 of 19

- 2 Milton Hydro has 342 microFIT and 19 FIT accounts that are settled monthly with the IESO. The
- 3 difference between the amounts credited to the microFIT and FIT projects and the hourly HOEP
- 4 value of the electricity is settled with the IESO each month.

5

6

1

#### Ontario Electricity Support Program ("OESP")

- 7 Milton Hydro determines the value of OESP credits applied to qualified low-income customer
- 8 accounts based on the corresponding general ledger activity billed during the month. This general
- 9 ledger activity is generated from the CIS system, based on statistic codes that are used for each
- 10 OESP Class and tariff code as well as adjustments. The IESO compensates Milton Hydro for its
- 11 OESP credits issued under IESO charge type 1420.

12

13

#### Global Adjustment Modifier ("GA Modifier")

- 14 Milton Hydro determines the value of the GA Modifier to qualified accounts from the general ledger
- 15 activity generated from the CIS system and the various statistic codes which are mapped to the
- 16 GA Modifier general ledger account. The IESO compensates Milton Hydro for its GA Modifier
- 17 credits under IESO charge type 1143.

18

19

#### Ontario Rebate for Electricity Consumers ("OREC")

- 20 Milton Hydro determines the value of the OREC qualified accounts from the general ledger activity
- 21 generated from the CIS system and the various statistic codes which are mapped to the OREC
- 22 general ledger account. The IESO compensates Milton Hydro for its GA Modifier credits under
- 23 IESO charge type 9982.

24

25

#### Certification

- 26 Milton Hydro has provided certification that it has robust processes and internal controls in place
- 27 for the preparation, review, verification and oversight of the account balances being disposed
- 28 at Appendix A.

Page 13 of 19

#### 3.2.5.4 Capacity Based Recovery ("CBR")

- 2 Milton Hydro follows the OEB's Accounting Guidance on CBR issued on July 25, 2016.
- 3 The variance recorded in Account 1580 Variance WMS, Sub-account CBR Class B is the
- 4 difference between the billed WMS revenues of \$0.0004/kWh booked in Account 4062 Billed -
- 5 WMS, Sub-account CBR Class B and the charges from the IESO under Charge Type 1351
- 6 and booked in Account 4708 Charges WMS, Sub-account CBR Class B.
- 7 Class A customers are billed their share of the actual Capacity Based Recovery ("CBR"), charged
- 8 by the IESO under Charge Type 1350, based on their respective Peak Demand Factor. All
- 9 amounts billed to Class A customers in recorded in Account 4062 Billed WMS, Sub-account
- 10 CBR Class A which is equal to the amount billed in Account 4708 WMS, Sub-account CBR
- 11 Class A. As such the balance in USoA 1580 Variance WMS Sub-account CBR Class A is zero.

#### 13 3.2.6 LRAM Variance Account ("LRAMVA")

14 Milton Hydro is not applying for the disposition of USoA 1568 LRAMVA.

#### **16 3.2.7 Tax Changes**

- 17 Milton Hydro has completed the 2020 IRM Rate Generator Model Tab 8. STS Tax Change to
- 18 calculate the difference between the taxes included in Milton Hydro's 2016 Cost of Service
- 19 Application as Varied by the OEB in its Decision and Order EB-2016-0255 dated February 22,
- 20 2018 Milton Hydro's Motion to Review and Vary the Decision and Order Dated July 25, 2016
- 21 and the 2018 taxes at current tax rates. There is no change in the tax rate therefore the
- 22 incremental tax sharing calculated in the model is zero (\$0.00) and results in no tax sharing
- required for Milton Hydro's 2020 rate application.

#### 3.2.8 Z Factor Claims

26 Milton Hydro is not filing for a Z-Factor adjustment.

24

- 18 Milton Hydro has not proposed any changes which may be outside of the IRM application
- 19 process.

20

21

- 2020 Rates
- 22 Proposed Distribution Rates and Other Charges
- 23 Milton Hydro has attached its proposed Tariff of Rates and Charges, to be effective May 1, 2020,
- 24 at Appendix C.
- 25 Milton Hydro calculated both the distribution charge impact and the customer total bill impact
- 26 using the results from the 2020 IRM Rate Generator Model. A typical Residential customer using

750 kWh would have a distribution rate increase of \$0.29 or 1.04% and a total bill increase of \$1.19 or 1.07% per month. In accordance with the Filing Requirements Milton Hydro has considered those Residential customers that make up the lowest 10% of annual consumption. In determining this level of consumption, Milton Hydro considered all Residential customers that had twelve months of billed consumption and sorted these customers from highest to lowest to get the low 10% of customers. The customer at the top of the list of the lowest 10% of customers uses 4,498 kWh per year or 375 kWh per month. Customers at this monthly consumption level would see a distribution rate increase of \$0.29 or 1.04% and a total bill increase of \$0.75 or 1.05%. A typical General Service < 50 kW customer using 2,000 kWh would have a distribution rate increase of \$0.58 or 1.09% and a total bill increase of \$2.33 or 0.86% per month.

The customer bill impacts for all classes are provided in detail in the Rate Generator Model Tab 20 Bill Impacts and are summarized in the following Table 3.

Table 3Customer Class Bill Impact Summary

Note: Based on Inflation 1.20%. On Oct. 31st OE	B set Inflation a	at 2.00%	Distributi	on Impact	Total Bill Impact	
CLASS	kWh	kW	\$\$\$	%	\$\$\$	%
RESIDENTIAL - RPP	750		0.29	1.04%	1.19	1.07%
GENERAL SERVICE LESS THAN 50 KW - RPP	2,000		0.58	1.09%	2.33	0.86%
GENERAL SERVICE 50 TO 999 KW	50,000	150	5.79	1.05%	(193.29)	(2.27%)
GENERAL SERVICE 1,000 TO 4,999 KW	1,265,000	1800	48.08	1.05%	(5,689.28)	(2.97%)
LARGE USE	2,400,000	5400	113.09	1.05%	(378.06)	(0.11%)
UNMETERED SCATTERED LOAD	405		0.17	1.13%	0.71	1.10%
SENTINEL LIGHTING	50	1	0.48	1.06%	2.21	3.64%
STREET LIGHTING	468,398	1317	250.81	1.10%	(1,328.68)	(1.37%)
RESIDENTIAL - RPP	375		0.29	1.04%	0.75	1.05%
RESIDENTIAL - Retailer	750		0.29	1.04%	(2.53)	(1.71%)
GENERAL SERVICE LESS THAN 50 KW - Retailer	2,000		0.58	1.09%	(7.66)	(2.09%)

#### **Minimum Distribution Charge**

Milton Hydro has a Minimum Distribution Charge – per kW of maximum billing demand in the previous 11 months. This rate needs to be updated and included in Milton Hydro's tariff for each of its General Service class from 50 kW to its Large Use class. This rate has not been

Filed: November 4, 2019

Page 16 of 19

- 1 adjusted by the Price Cap Index in the Rate Generator Model and typically Milton Hydro has
- 2 had to adjust this rate manually.
- 3 Milton Hydro has applied the Price Cap Index to the current charge and included \$0.6488 per
- 4 kW (\$0.6179 X 1.05) in its proposed Tariff of Rates and Charges for May 1, 2020. The
- 5 Minimum Distribution Charge will require adjustment to reflect the publication of the most
- 6 current Price Escalator of 2.00% as set by the OEB on October 31, 2019.

7

8

#### 2020 IRM Rate Generator Model

- 9 Milton Hydro has completed the most current version of the 2020 IRM Rate Generator Model and
- provided both a hard copy at Appendix D and a live Excel version (by way of the RESS). 10

11

12

#### Conclusion

- 13 Milton Hydro respectfully submits that it has complied with the Ontario Energy Board's Chapter 3
- 14 of the Filing Requirements for Electricity Distribution Rate Applications - 2018 Edition for 2019
- Rate Applications issued July 12, 2018. 15
- 16 The proposed rates for the distribution of electricity reflect Milton Hydro's 2019 distribution rates
- 17 adjusted for the price cap index calculated on the Price Escalator less the Productivity Factor and
- 18 Milton Hydro's Stretch Factor as provided for in the 2020 IRM Rate Generator Model.
- 19 Milton Hydro's Retail Transmission Service Rates have been calculated in accordance with the
- 20 Electricity Distribution Retail Transmission Service Rates Guideline G-2008-0001, Revision 4.0
- 21 dated June 28, 2012 and the 2020 IRM Rate Generator Model.
- 22 In accordance with the Report of the Board on Electricity Distributors' Deferral and Variance
- 23 Account Review Initiative ("the EDDVAR Report") issued July 31, 2009, Milton Hydro's total Group
- 24 1 Deferral and Variance Account balance for the Threshold Test is a debit in the amount of
- 25 \$465,532, which equates to \$0.0005 per kWh and does not meet the EDDVAR Report Threshold
- 26 Test of +/- \$0.001 per kWh. Milton Hydro is not proposing the disposition of the Group 1 Account
- 27 balances.

Milton Hydro Distribution Inc. EB-2019-0053 2020 IRM Electricity Distribution Rate Application Filed: November 4, 2019

Page 17 of 19

1 The Filing Requirements, which state "Starting for the 2019 rate applications, distributors who

- 2 meet the requirements for disposition of residual balances of Account 1595 sub-accounts,
- 3 must complete the 1595 Analysis Workform." As discussed above, Milton Hydro's Group 1
- 4 balance does not meet the EDDVAR threshold for disposition, as such Milton Hydro has not
- 5 completed the 1595 Analysis Workform.
- 6 Milton Hydro has completed the 2020 IRM Rate Generator Model Tab 8. STS Tax Change
- 7 which has resulted in a zero (\$0.00) tax difference between 2016 and 2020 tax rates and therefore
- 8 no tax sharing is required.
- 9 Milton Hydro is not proposing the disposition of the Global Adjustment balance in USoA 1589 and
- 10 as such the GA Analysis Workform for 2018 is not required to be filed. As provided above, Milton
- 11 Hydro did complete a GA Analysis Workform for internal purposes to ensure its GA balance was
- less than the 1% for 2018 and going forward into 2019.
- 13 The Filing Requirements, which state "Starting for the 2019 rate applications, distributors who
- meet the requirements for disposition of residual balances of Account 1595 sub-accounts,
- 15 must complete the 1595 Analysis Workform." As discussed above, Milton Hydro's Group 1
- 16 balance does not meet the EDDVAR threshold for disposition, as such Milton Hydro has not
- 17 completed the 1595 Analysis Workform.
- 18 Milton Hydro's Specific Service Charges are consistent with those previously approved by the
- 19 OEB in Milton Hydro's 2016 Tariff of Rates and Charges. The Retail Service Charges are
- 20 consistent with Milton Hydro's 2016 Tariff of Rates and Charges as adjusted by the OEB for
- 21 inflation.

24

25

- 22 Milton Hydro submits that the rate impact on the customer classes does not exceed the 10%
- threshold and therefore no mitigation is required as set out in Table 3 above.

#### Relief Sought

- 26 Milton Hydro is making an Application for an Order or Orders approving the following:
- The proposed distribution rates and other charges set out in Appendix C to this
  Application as just and reasonable rates and charges pursuant to section 78 of the OEB
- Act, to be effective May 1, 2020, or as soon as possible thereafter; and

Milton Hydro Distribution Inc. EB-2019-0053 2020 IRM Electricity Distribution Rate Application Filed: November 4, 2019 Page 18 of 19

1 If the OEB is unable to provide a Decision and Order on this Application for implementation 2 by Milton Hydro as of May 1, 2020, Milton Hydro requests that the OEB issue an Interim 3 Order approving the proposed distribution rates and other charges, effective May 1, 2020, 4 which may be subject to adjustment based on a final Decision and Order; 5 Approval of Milton Hydro's 2020 Retail Transmission Service Rates for Network and 6 Connection charges as set out in Table 1 above; 7 8 Form of Hearing Requested 9 Milton Hydro is requesting its Application to be heard by an OEB staff person to whom the OEB 10 has delegated its adjudicative powers and duties under section 6 of the Ontario Energy Board 11 Act, 1998, (the "Act") and further that this employee may exercise their delegated powers and 12 duties under section 6(4) of the Act and proceed without a hearing. 13 14 Respectfully submitted this 4<sup>th</sup> day of November 2019. 15 16 Original signed by Cameron McKenzie 17 18 Cameron McKenzie, CPA, CGA 19 Director, Regulatory Affairs 20 Milton Hydro Distribution Inc. 21 22 23 24 **Attachments** Certification of Evidence 25 Appendix A 26 Appendix B 2019 Approved Tariff of Rates and Charges 27 Appendix C 2020 Proposed Tariff of Rates and Charges

## Appendix A Certification of Evidence

#### MILTON HYDRO DISTRIBUTION INC. ("Milton Hydro")

## APPLICATION FOR APPROVAL OF 2020 ELECTRICITY DISTRIBUTION RATES EB-2019-0053

#### **CERTIFICATION OF EVIDENCE**

I, Mary-Jo Corkum, Vice President Finance, hereby certify that the evidence filed in Milton Hydro Distribution Inc.'s 2020 IRM Electricity Distribution Rate Application is accurate, consistent and complete to the best of my knowledge and has been filed in accordance with Chapter 3 of the Ontario Energy Board Filing Requirements for Electricity Distribution Rate Applications – 2018 Edition for 2019 Rate Applications.

I also certify that Milton Hydro has processes and internal controls in place for the preparation, review, verification and oversight of the account balances being disposed.

Mary-Jo Corkum

Vice President Finance

EB-2018-0053

#### RESIDENTIAL SERVICE CLASSIFICATION

This classification refers to the supply of electrical energy to detached, semi-detached and townhouse residential buildings as defined in local zoning bylaws. A residential service is a single-family unit used for domestic or household purposes, including seasonal occupancy. At Milton Hydro's discretion, residential rates may be applied to apartment buildings with 6 or less units by simple application of the residential rate by blocking the residential rate by the number of units. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

Where the residential dwelling comprises the entire electrical load of a farm, it is defined as a residential service. Where the residential dwelling does not comprise the entire electrical load of the farm:

- The service will be defined as a General Service if the occupant derives his/her principal livelihood from the working of the farm;
- The service will be defined as a Residential Service if the occupant does not derive his/her principal livelihood from the working of the farm;
- Where the residential farm dwelling is supplied by one separately metered service and the electrical loads in other buildings are supplied by a different separately metered service, then the former is defined as a Residential Service and the latter is defined as a General Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

#### GENERAL SERVICE LESS THAN 50 KW SERVICE CLASSIFICATION

This classification refers to a non-residential customer with an average peak demand below 50 kW over the past twelve months. For a new customer without prior billing history, the peak demand will be based on the customer's proposed capacity. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

EB-2018-0053

#### **GENERAL SERVICE 50 TO 999 KW SERVICE CLASSIFICATION**

This classification refers to a non-residential customer with an average peak demand equal to or greater than 50 kW and less than 1,000 kW over the past twelve months. For a new customer without prior billing history, the peak demand will be based on the customer's proposed capacity. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Capacity Based Recovery (CBR) - Applicable for Class B Customers	\$/kWh	0.0004
Rural or Remote Electricity Rate Protection Charge (RRRP)	\$/kWh	0.0005
Standard Supply Service - Administrative Charge (if applicable)	\$	0.25

Effective and Implementation Date May 1, 2019

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2018-0053

#### UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification refers to the supply of electricity to unmetered loads less than 50 kW including traffic signals and pedestrian X-walks signals/beacons, bus shelters, telephone booths, signs, Cable TV amplifiers and decorative lighting and tree lighting connected to Milton Hydro's distribution system, and similar small unmetered loads. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Service Charge (per connection)	\$	8.17
Distribution Volumetric Rate	\$/kWh	0.0173

	Clearance pole attachment charge \$/pole/year	\$	5.59

NOTE: Ontario Energy Board Rate Order EB-2017-0183, issued on March 14, 2019, identifies changes to the Non-Payment of Account Service Charges effective July 1, 2019

Effective and Implementation Date May 1, 2019

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2018-0053

### RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	\$	100.00
Monthly fixed charge, per retailer	\$	40.00
Monthly variable charge, per customer, per retailer	\$/cust.	1.00
Distributor-consolidated billing monthly charge, per customer, per retailer	\$/cust.	0.60
Retailer-consolidated billing monthly credit, per customer, per retailer	\$/cust.	(0.60)
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.50
Processing fee, per request, applied to the requesting party	\$	1.00
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail		
Settlement Code directly to retailers and customers, if not delivered electronically through the		
Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year	\$	no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.00
Notice of switch letter charge, per letter (unless the distributor has opted out of applying the charge as per the		
Ontario Energy Board's Decision and Order EB-2015-0304, issued on February 14, 2019)	\$	2.00

#### LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

Total Loss Factor - Secondary Metered Customer < 5,000 kW	1.0375
Total Loss Factor - Secondary Metered Customer > 5,000 kW	1.0154
Total Loss Factor - Primary Metered Customer < 5,000 kW	1.0272
Total Loss Factor - Primary Metered Customer > 5,000 kW	1.0054

### Appendix C

Proposed Tariff of Rates and Charges Effective May 1, 2020

#### Effective and Implementation Date May 1, 2020

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2019-0053

#### RESIDENTIAL SERVICE CLASSIFICATION

This classification refers to the supply of electrical energy to detached, semi-detached and townhouse residential buildings as defined in local zoning bylaws. A residential service is a single-family unit used for domestic or household purposes, including seasonal occupancy. At Milton Hydro's discretion, residential rates may be applied to apartment buildings with 6 or less units by simple application of the residential rate by blocking the residential rate by the number of units. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

Where the residential dwelling comprises the entire electrical load of a farm, it is defined as a residential service. Where the residential dwelling does not comprise the entire electrical load of the farm:

- The service will be defined as a General Service if the occupant derives his/her principal livelihood from the working of the farm;
- The service will be defined as a Residential Service if the occupant does not derive his/her principal livelihood from the working of the farm:
- Where the residential farm dwelling is supplied by one separately metered service and the electrical loads in other buildings are supplied by a different separately metered service, then the former is defined as a Residential Service and the latter is defined as a General Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

EB-2019-0053

#### **GENERAL SERVICE LESS THAN 50 KW SERVICE CLASSIFICATION**

This classification refers to a non-residential customer with an average peak demand below 50 kW over the past twelve months. For a new customer without prior billing history, the peak demand will be based on the customer's proposed capacity. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

#### **GENERAL SERVICE 50 TO 999 KW SERVICE CLASSIFICATION**

This classification refers to a non-residential customer with an average peak demand equal to or greater than 50 kW and less than 1,000 kW over the past twelve months. For a new customer without prior billing history, the peak demand will be based on the customer's proposed capacity. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Transmission Rate - Line and Transformation Connection Service Rate - Interval Metered	\$/kW	2.9161
MONTHLY RATES AND CHARGES - Regulatory Component		
Wholesale Market Service Rate (WMS) - not including CBR	\$/kWh	0.0030
Capacity Based Recovery (CBR) - Applicable for Class B Customers	\$/kWh	0.0004
Rural or Remote Electricity Rate Protection Charge (RRRP)	\$/kWh	0.0005

#### Effective and Implementation Date May 1, 2020

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2019-0053

#### UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification refers to the supply of electricity to unmetered loads less than 50 kW including traffic signals and pedestrian X-walks signals/beacons, bus shelters, telephone booths, signs, Cable TV amplifiers and decorative lighting and tree lighting connected to Milton Hydro's distribution system, and similar small unmetered loads. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Service Charge (per connection) Distribution Volumetric Rate Low Voltage Service Rate Retail Transmission Rate - Network Service Rate Retail Transmission Rate - Line and Transformation Connection Service Rate	\$ \$/kWh \$/kWh \$/kWh	8.26 0.0175 0.0006 0.0067 0.0058

changes to the Non-Payment of Account Service Charges effective July 1, 2019

Effective and Implementation Date May 1, 2020

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2019-0053

#### **RETAIL SERVICE CHARGES (if applicable)**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

electricity.		
One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	\$	101.20
Monthly fixed charge, per retailer	\$	40.48
Monthly variable charge, per customer, per retailer	\$/cust.	1.01
Distributor-consolidated billing monthly charge, per customer, per retailer	\$/cust.	0.61
Retailer-consolidated billing monthly credit, per customer, per retailer	\$/cust.	(0.61)
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.51
Processing fee, per request, applied to the requesting party	\$	1.01
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail		
Settlement Code directly to retailers and customers, if not delivered electronically through the		
Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year	\$	no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.05
Notice of switch letter charge, per letter (unless the distributor has opted out of applying the charge as per the		
Ontario Energy Board's Decision and Order EB-2015-0304, issued on February 14, 2019)	\$	2.00

#### **LOSS FACTORS**

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

Total Loss Factor - Secondary Metered Customer < 5,000 kW	1.0375
Total Loss Factor - Secondary Metered Customer > 5,000 kW	1.0154
Total Loss Factor - Primary Metered Customer < 5,000 kW	1.0272
Total Loss Factor - Primary Metered Customer > 5,000 kW	1.0054

# Appendix D 2020 IRM Rate Generator Model – V1.1

#### Summary of Changes from the Prior Year

- 1 Questions are added to tab 1:
- a Depending on the responses selected in tab 1, the continuity schedule in tab 3 will open to the appropriate year in which utilities are to start inputting DVA balances.
- b Questions that were on tab 3 (regarding Class A customers), tab 6 and 6.2 (regarding year of last disposition for GA and CBR Class B) are moved to tab 1.
- In the continuity schedule on tab 3, an option on whether Accounts 1588 and 1589 is requested for disposition has been added in column BU.
- 3 Table 3b in tab 6 is revised to input Class A consumption on a total rate class basis instead of on a individual customer basis. Table 3b pertains to Class A consumption for customers that were Class A for the entire year during period the balance where Account 1589 GA or Account 1580 CBR Class B accumulated.
- 4 In tab 4, an option not to request DVA balances for disposition has been added if the threshold test is met.
- <sup>5</sup> In tab 6.1a , the first table for Allocation of Total Non-RPP Consumption (kWh) between Current Class B and Class A/B Transition Customers is modified. Utilities only need to input Non-RPP less WMP consumption for years prior to 2018, as applicable.
- 6 In tab 6.2a, the first table for Allocation of Total Consumption (kWh) between Current Class B and Class A/B Transition Customers is modified. Utilities only need to input Non-RPP less WMP consumption for years prior to 2018, as applicable.

#### Detailed Instructions for Each Tab

Detailed Instruction	Detailed Instructions for Each Tab						
Tab	Tab Details	Step	Details				
1 - Information Sheet	This tab shows some information pertaining to the utility	1	Complete the information sheet.				
	and the application.		a) Questions 2 to 4				
			Responses to questions 2 to 4 will open the DVA continuity schedule in tab 3 to the appropriate year that DVA balances should first be inputted.				
			b) Questions 5 and 6				
			If the response to question 5 (GA) or 6 (CBR Class B) is yes, tab 6 relating to Class A customers' consumption will be generated.				
			If the response to question 6 is yes, then tab 6.2 will also be generated. This tab will allocate and dispose the balance in Account 1580, sub-account CBR				
			Class B through a separate rate rider using information inputted in tab 6, unless a rate rider is not produced.				
			If the response to question 6 is no, then the balance in the Account 1580, sub-account CBR Class B will be allocated and disposed with Account 1580 WMS,				
			as part of the general DVA rate rider				
3 - Continuity	This tab is the continuity schedule that shows all the	2	Complete the DVA continuity schedule.				
Schedule	accounts and the accumulation of the balances a utility						
	has.		a) For all Group 1 accounts, except Account 1595:				
			The continuity schedule will open from the year the GL balance was last disposed. Start inputting the approved ending balances in the Adjustments column				
			of that year.				
			For example, if in the 2019 rate application, DVA balances as at December 13, 2017 were approved for disposition, the continuity schedule will commence from 2017. Start by inputting the approved closing 2017 balances in the Adjustments column under 2017.				
			your 2227. Start by imparing the approved closing 2027 bulliness in the registration and the 2027.				
			b) For all Account 1595 sub-accounts:				
			Complete the DVA continuity schedule for each Account 1595 vintage year that has a GL balance as at December 31, 2018, regardless of whether the				
			account is being requested for disposition in the current application.				
			The continuity schedule will open in the year of the earliest Account 1595 vintage year that has a balance. For each Account 1595 sub-account, start				
			inputting data from the year the sub-account started to accumulate a balance (i.e. the wintage year).				
			For example, Account 1595 (2015) would accumulate a balance starting in 2015, when the relevant balances approved for disposition were first transferred				
			into Account 1595 (2015). Input the amount approved for disposition in the OEB Approved Disposition column.				
			Note that the DVA continuity schedule can currently start from 2013, if a utility has an Account 1595 with a vintage year prior to 2013, then a separate schedule should be provided starting from that vintage year.				
			schedule should be provided starting from that vintage year.				
		3	For Accounts 1588, 1589 and 1595, indicate whether disposition is requested in column BU.				
		4	Review any balance variance between the DVA continuity schedule and the RRR in column BW. Provide an explanation, if necessary.				
4 - Billing Determinant	This tab shows the billing determinants that will be used	5	Confirm the accuracy of the RRR data used to populate the tab.				
4 - Billing Determinant	to allocate account balances and calculate rate riders.	3	Collinia de accuracy of the non-data used to populate the tab.				
		6	Review the disposition threshold calculation. Select whether disposition is being requested or not in the drop down box.				
6 - Class A Data Consumption	This tab is to be completed if there were any Class A customers at any point during the period the GA balance	7	This tab is generated when the utility selects yes to questions 5 or 6 in tab 1, indicating they had Class A customers during the period that the GA or CBR balance accumulated.				
Consumption	or CBR Class B accumulated. The data on this tab is used		balance accumulated.				
	for the purposes of determining the GA rate rider, CBR	8	Under #2a, indicate whether the utility had any customers that transitioned between Class A and B during the period the Account 1589 GA balance				
	Class B rate rider (if applicable), as well as customer		accumulated. If yes, tab 6.1a will be generated.				
	specific GA and CBR charges for transition customers (if						
	applicable).		Under #2b, indicate whether the utility had any customers that transitioned between Class A and B during the period the Account 1580, sub-account CBR				
			Class B balance accumulated. If yes, tab 6.2a will be generated.				
		9	Under #3a, enter the number of transition customers the utility had during the period the Account 1589 GA or Account 1580 CBR B balances accumulated.				
			A table will be generated based on the number of customers.				
			Complete the table accordingly for each transition customer identified (i.e. kWh/kW for half year periods, and the customer class during the half year). This				
			data will automatically be used in the GA balance and CBR Class B balance allocation to transition customers in tabs 6.1a and 6.2a respectively. This data				
			will also be used in the calculation of billing determinants for GA and CBR Class B balances, as applicable.				
			Note that each transition customer identified in tab 6, table 3a will be assigned a customer number and the number will correspond to the same transition				
			customer populated in tabs 6.1a and 6.2a.				
			Also note that the transition customers identified for the GA may be different than those for CBR Class B. This would depend on the period in which the GA and CBR Class B balances accumulated.				
			and con class o valances atturifiede.				
		10	I I do H3h catacath a supply of sets along its which there was full was flow 5 and a supply of the set of the				
		10	Under #3b, enter the number of rate classes in which there were full year Class A customers during the period the Account 1589 GA balance or Account 1580 CBR Class B balance accumulated. A table will be generated based on the number of rate classes.				
			2500 CON CIDES O SUBMICE COCOMMISSION OF BUILDING WITH DE BETTE BEED UNE DE CIDES CONTROL CIDES CONT				
			Complete the table accordingly for each rate class identified (i.e. total Class A consumption in the rate class identified for each year). This data will be used in				
			the calculation of billing determinants for GA and CBR Class B, as applicable.				
			1				

6.1a - GA Allocation	This tab allocates the GA balance to each transition customer for the period in which these customers were Class B customers and contributed to the GA balance (i.e. former Class B customers but are now Class A customers and former Class A customers who are now Class B customers).		This tab is generated when the utility indicates that they had transition customers in tab 6, #2a during the period the Account 1589 GA balance accumulated.  In row 20, enter the Non-RPP consumption less WMP consumption.  The rest of the information in this tab will be auto-populated and will calculate the customer specific allocation of the GA balance to transition customers in the bottom table. All transition customers who are allocated a specific GA amount are not to be charged the general Non-RPP Class B GA rate rider as calculated in tab 6.1.
6.1 - GA	This tab calculates the GA rate rider to be applied to all non-RPP Class B customers (except for the transition customers allocated a customer specific balance in tab 6.1a).	12	Enter the proposed rate rider recovery period if different than the default 12 month period. The rest of the information in the tab is auto-populated and the GA rate riders are calculated accordingly based on whether there were any transition customers during the period that the GA balance accumulated.
6.2a - CBR_B Allocation	This tab allocates the CBR Class B balance to each transition customer for the period in which these customers were Class B customers and contributed to the CBR Class B balance (i.e. former Class B customers but are now Class A customers and former Class A customers who are now Class B).	13	This tab is generated when the utility indicates that they had transition customers in tab 6, #2b during the period where the CBR Class B balance accumulated.  In row 19, enter the total Class B consumption less WMP consumption.  The rest of the information in this tab will be auto-populated and will calculate the customer specific allocation of the CBR Class B balance to transition customers in the bottom table. All transition customers who are allocated a specific CBR Class B amount are not to be charged the general CBR Class B rate rider.
6.2 - CBR	This tab calculates the CBR Class B rate rider if there were Class A customers at any point during the period that the CBR Class B balance accumulated.	14	This tab is generated when the response to question 6 in tab 1 is "yes", indicating that they had Class A customers during the period that Account 1580, sub-account CBR Class B balance accumulated.  No input is required in this tab. The information in the tab is auto-populated and the CBR Class B rate riders are calculated accordingly.  If a rate rider is not produced, the entire Account 1580 CBR Class B balance, including the amount allocated to transition customers will be transferred to Account 1580 WMS, to be disposed through the general Group 1 DVA rate rider.
5 - Allocating Def-Var Balances	This tab allocates the Group 1 balances, except GA and CBR Class B (if Class A customers exist).	15	Review the allocated balances to ensure the allocation is appropriate. Note that the final allocation for Account 1580, sub-account CBR Class B is calculated after the completion of tabs 6 to 6.2a.
7 - Calculation of Def- Var RR	This tab calculates the Group 1 rate riders, except for GA and CBR Class B (if Class A customers exist)	16	Enter the proposed rate rider recovery period if different than the default 12 month period. The rest of the information in the tab is auto-populated and the rate riders are calculated accordingly.

### Milton Hydro Distribution Inc. TARIFF OF RATES AND CHARGES

Effective and Implementation Date May 1, 2019
This schedule supersedes and replaces all previously approved schedules of Rates. Charges and Loss Factors

EB-2018-0053

#### RESIDENTIAL SERVICE CLASSIFICATION

This classification refers to the supply of electrical energy to detached, semi-detached and townhouse residential buildings as defined in local zoning bylaws. A residential service is a single-family unit used for domestic or household purposes, including seasonal occupancy. At Milton Hydro's discretion, residential rates may be applied to apartment buildings with 6 or less units by simple application of the residential rate by blocking the residential rate by the number of units. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

Where the residential dwelling comprises the entire electrical load of a farm, it is defined as a residential service. Where the residential dwelling does not comprise the entire electrical load of the farm:

- The service will be defined as a General Service if the occupant derives his/her principal livelihood from the working of the farm;
- The service will be defined as a Residential Service if the occupant does not derive his/her principal livelihood from the working of the farm;
- Where the residential farm dwelling is supplied by one separately metered service and the electrical loads in other buildings are supplied by a different separately metered service, then the former is defined as a Residential Service and the latter is defined as a General Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

#### **GENERAL SERVICE LESS THAN 50 KW SERVICE CLASSIFICATION**

This classification refers to a non-residential customer with an average peak demand below 50 kW over the past twelve months. For a new customer without prior billing history, the peak demand will be based on the customer's proposed capacity. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Service Charge	\$	17.14

#### **GENERAL SERVICE 50 TO 999 KW SERVICE CLASSIFICATION**

This classification refers to a non-residential customer with an average peak demand equal to or greater than 50 kW and less than 1,000 kW over the past twelve months. For a new customer without prior billing history, the peak demand will be based on the customer's proposed capacity. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

#### **GENERAL SERVICE 1,000 TO 4,999 KW SERVICE CLASSIFICATION**

This classification refers to a non-residential customer with an average peak demand equal to or greater than 1,000 kW and less than 5,000 kW, regardless of when the demand occurs, averaged over twelve months. For a new customer without prior billing history, the peak demand will be based on the customer's proposed capacity. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market price participate.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Total Group 1 Balance	
LRAM Variance Account (only input amounts if applying for disposition of this account)	1568
Total including Account 1568	

For all OEB-Approved dispositions, please ensure that the disposition amount has the same sign (e.g. debit balances are to have a positive figure and credit balance are to have a negative figure) as per the related OEB decision.

- 1 Please provide explanations for the nature of the adjustments. If the adjustment relates to previously OEB-Approved disposed balances, please provide amounts for adjustments and include supporting documentations.
- 2 1) If the LDC's rate year begins on January 1, 2020, the projected interest is recorded from January 1, 2019 to December 31, 2019 on the December 31, 2018 balances adjusted to remove balances approved for disposition in the 2019 rate decision.
- 2) If the LDC's rate year begins on May 1, 2020, the projected interest is recorded from January 1, 2019 to April 30, 2020 on the December 31, 2018 balances adjusted to remove balances approved for disposition in the 2019 rate decision.
- 3 The individual sub-accounts as well as the total for all Account 1595 sub-accounts is to agree to the RRR data. Differences need to be explained. For each Account 1595 sub-account, the transfer of the balance approved for disposition into Account 1595 is to be recorded in "OEB Approved Disposition" column. The recovery/refund is to be recorded in the "Transaction" column. The audited balance in the account is only to be disposed a year after the recovery/refund period has been completed. Generally, no further transactions would be expected to flow through the account after that. Any vintage year of Account 1595 is only to be disposed once on a final basis. No further dispositions of these accounts are generally expected thereafter, unless justified by the distributor.
  Select ves in column BU if the sub-account is requested for disposition
- 4 Effective May 23, 2017, per the OEB's letter titled Guidance on Disposition of Accounts 1588 and 1589, applicants must reflect RPP settlement true-up claims pertaining to the period that is being requested for disposition in Accounts 1588 and 1589. The amount requested for disposition starts with the audited account balance. If the audited account balance does not reflect the true-up claims for that year, the impacts of the true-up claims are to be shown in the Adjustment column that year. Note that this true-up claim will need to be reversed in the amount requested for disposition in the following year, unless the RPP settlement true-up claim was not reflected as an adjustment in the previously disposed ending account balance. Also see Accounting Procedures Handbook Update Accounting Guidance Related to Commodity Pass-Through Accounts 1588 at 1589, dated February 21, 2019 for further detailed accounting guidance.
- 5 Account 1580 RSVA WMS balance inputted into this schedule is to exclude any amounts relating to CBR. CBR amounts are to be inputted into Account 1580, sub-accounts CBR Class A and Class B separately. There is no disposition of Account 1580, sub-account CBR Class A, accounting guidance for this sub-account is to be followed. If a balance exists for Account 1580, sub-account CBR Class A as at Dec. 31, 2018, the balance must be explained.

Data on this worksheet has been populated using your most recent RRR filing.

If you have identified any issues, please contact the OEB.

Have you confirmed the accuracy of the data below?

Yes

If a distributor uses the actual GA price to bill non-RPP Class B customers for an entire rate class, it must exclude these customers from the allocation of the GA balance and the calculation of the resulting rate riders. These rate classes are not to be charged/refunded the general GA rate rider as they did not contribute to the GA

Please contact the OEB to make adjustments to the IRM rate generator for this situation.

#### Threshold Test

Total Claim (including Account 1568)

Total Claim for Threshold Test (All Group 1 Accounts)

Threshold Test (Total claim per kWh) <sup>2</sup>

As per Section 3.2.5 or the 2019 Filling Requirements for Electricity Distribution Rate Applications, an applicant may elect to dispose of the Group 1 account balances below the threshold. If doing so, please select YES from the adjacent drop-down cell and also indicate so in the Manager's Summary. If not, please select NO.

\$465,532 \$465,532

\$0.0005 Claim does not meet the threshold test.

<sup>&</sup>lt;sup>1</sup> Residual Account balance to be allocated to rate classes in proportion to the recovery share as established when rate riders were implemented.

<sup>&</sup>lt;sup>2</sup> The Threshold Test does not include the amount in 1568.

<sup>&</sup>lt;sup>3</sup> The proportion of customers for the Residential and GS<50 Classes will be used to allocate Account 1551.

No input required. This workshseet allocates the deferral/variance account balances (Group 1 and 1568) to the appropriate classes as per EDDVAR dated July 31, 2009

#### Notes

- 1. Regarding the small business deduction, if applicable,
  - a. If taxable capital exceeds \$15 million, the small business rate will not be applicable.
  - b. If taxable capital is below \$10 million, the small business rate would be applicable.
  - c. If taxable capital is between \$10 million and \$15 million, the appropriate small business rate will be calculated.
- 2. The OEB's proxy for taxable capital is rate base.

Calculation of Rebased Revenue Requirement and Allocation of Tax Sharing Amount. Enter data from the last OEB-Approved Cost of Service application in columns (through H.

As per Chapter 3 Filing Requirements, shared tax rate riders are based on a 1 year disposition

n the green shaded cells, enter billing detail for wholesale transmission for the same reporting period as the billing determinants on Tab 10. For Hydro One Sub-transmission Rates, if you are charged a combined Line and Transformation Connect connection active are completed.

f any of the Hydro One Sub-transmission rates (column E, I and M) are highlighted in red, please double check the billing data entered in "Units Billed" and "Amount" columns. The highlighted rates do not

#### RESIDENTIAL SERVICE CLASSIFICATION

This classification refers to the supply of electrical energy to detached, semi-detached and townhouse residential buildings as defined in local zoning bylaws. A residential service is a single-family unit used for domestic or household purposes, including seasonal occupancy. At Milton Hydro's discretion, residential rates may be applied to apartment buildings with 6 or less units by simple application of the residential rate by blocking the residential rate by the number of units. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

Where the residential dwelling comprises the entire electrical load of a farm, it is defined as a residential service. Where the residential dwelling does not comprise the entire electrical load of the farm:

- The service will be defined as a General Service if the occupant derives his/her principal livelihood from the working of the farm;
- The service will be defined as a Residential Service if the occupant does not derive his/her principal livelihood from the working of the farm;
- Where the residential farm dwelling is supplied by one separately metered service and the electrical loads in other buildings are supplied by a different separately metered service, then the former is defined as a Residential Service and the latter is defined as a General Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

#### **GENERAL SERVICE 50 TO 999 KW SERVICE CLASSIFICATION**

This classification refers to a non-residential customer with an average peak demand equal to or greater than 50 kW and less than 1,000 kW over the past twelve months. For a new customer without prior billing history, the peak demand will be based on the customer's proposed capacity. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

#### microFIT SERVICE CLASSIFICATION

This classification applies to an electricity generation facility contracted under the Indepedent Electricity System Operator's microFIT program and connected to the distributor's distribution system. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

#### **MONTHLY RATES AND CHARGES - Delivery Component**

Service Charge \$ 5.40

Effective and Implementation Date May 1, 2020

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2019-0053

#### **ALLOWANCES**

Transformer Allowance for Ownership - per kW of billing demand/month	\$/kW	(0.60)
Primary Metering Allowance for Transformer Losses - applied to measured demand & energy	%	(1.00)

#### SPECIFIC SERVICE CHARGES

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST

Customer Administration		
Arrears certificate	\$	15.00
Statement of account	\$	15.00
Easement letter	\$	15.00
Credit reference/credit check (plus credit agency costs)	\$	15.00
Account set up charge/change of occupancy charge (plus credit agency costs if applicable)	\$	30.00
Returned cheque (plus bank charges)	\$	15.00
Special meter reads	\$	30.00
Non-Payment of Account		
Late payment - per month	%	1.50
Late payment - per annum	%	19.56
Collection of account charge - no disconnection	\$	30.00
Disconnect/reconnect for non payment of account - at meter during regular hours	\$	65.00
Disconnect/reconnect for non payment of account - at meter after regular hours	\$	185.00
Other		
Optional interval/TOU meter charge \$/month	\$	5.50
Specific charge for access to the power poles - \$/pole/year	\$	44.15
(with the exception of wireless attachments)		
Clearance pole attachment charge \$/pole/year	\$	5.59
NOTE: Ontario Energy Board Rate Order EB-2017-0183, issued on March 14, 2019, identifies changes to the Non-Payment of Account Service Charges effective July 1, 2019		

Effective and Implementation Date May 1, 2020
This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

FB-2019-0053

#### RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	\$	101.20
Monthly fixed charge, per retailer	\$	40.48
Monthly variable charge, per customer, per retailer	\$/cust.	1.01
Distributor-consolidated billing monthly charge, per customer, per retailer	\$/cust.	0.61
Retailer-consolidated billing monthly credit, per customer, per retailer	\$/cust.	(0.61)
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.51
Processing fee, per request, applied to the requesting party	\$	1.01
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail		
Settlement Code directly to retailers and customers, if not delivered electronically through the		
Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year	\$	no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.05
Notice of switch letter charge, per letter (unless the distributor has opted out of applying the charge as per the		
Ontario Energy Board's Decision and Order EB-2015-0304, issued on February 14, 2019)	\$	2.00

#### **LOSS FACTORS**

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

Total Loss Factor - Secondary Metered Customer < 5,000 kW	1.0375
Total Loss Factor - Secondary Metered Customer > 5,000 kW	1.0154
Total Loss Factor - Primary Metered Customer < 5,000 kW	1.0272
Total Loss Factor - Primary Metered Customer > 5,000 kW	1.0054

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customer at the distributor's 10th consumption percentile (In other words, 10% of a distributor's residential customers consume at or less than this level of consumption on a monthly basis). Refer to section 3.2.3 of the Chapter 3 Filling Requirements For Electricity Distribution Rate Applications.

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

#### Note

- 1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2018 of \$0.1117/kWh (IESO's Monthly Market Report for May 2018, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.
- 2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

# Appendix E GA Analysis Workform Appendix A

#### **Purpose:**

To calculate an approximate expected balance in Account 1589 RSVA - GA and compare the expected amount to the amount in the General Ledger. Material differences between the two need to be reconciled and explained on an annual basis. Materiality is assessed on an annual basis based on a threshold of +/- 1% of the annual IESO GA charges.

Note that this is a generic analysis template, utilities may need to alter the analysis as needed for their specific circumstances. Any alterations to the analysis must be clearly disclosed and explained.

#### Steps for completing the GA Analysis WorkForm:

- **1.** Complete Appendix A, GA Methodology description attached to the end of these instructions.
- 2. Complete the Information Sheet:
  - a) From the drop-down box, select your Utility Name. This selection will result in pre-populating RRR data for Note 2, i.e. Consumption Data Excluding Loss Factor in the WorkForm (see 2b below).
    - **NB**: The purpose of the Consumption Data table is to validate the accuracy of the kWh quantities used to calculate the expected net transactions in account 1589 RSVA -GA for the calendar year.
    - kWh Consumption data will auto-populate for years 2017 onwards. For years before 2017, the kWh Consumption Data Excluding Loss Factor must be manually input. The data should agree to the RRR data reported, where applicable (i.e. Total Metered excluding WMP, RPP and non-RPP).
  - b) Under Note 1, check off the years over which GA balances have accumulated since they were last disposed (on interim or final basis), regardless of whether or not the balances are proposed for disposition in the current proceeding. A WorkForm sheet will open up for each year selected.
- **3.** Under Note 2 of the GA Analysis WorkForm generated for 2017 onwards, review the pre-populated RRR data and confirm that it is accurate. If not, please explain the discrepancy.
- **4.** Under Note 3, from the drop-down box, select the GA Billing Rate (i.e. 1st Estimate, 2nd Estimate or Actual). This selection will result in populating Column J

GA Rate Billed (\$/kWh) in the table under Note 4. Also confirm that the utility uses the same rate for recording unbilled revenues entry by checking off the check box. If not confirmed, please explain.

- **NB**: The same GA rate is to be used for all non-RPP Class B customers within a customer class (per O.Reg 429/04, section 16(3)).
- **5.** Under Note 4, complete columns F, G and H of the Table based on calendar month consumption.
  - NB: The WorkForm requires kWh volumes for revenues and expenses on a calendar month basis. It assumes kWh volumes sold adjusted for losses are equal to purchased kWh volumes based on the following formula: Billed kWh for the current calendar month's consumption minus prior month's kWh consumption billed in the current month month plus current month's kWh consumption billed in subsequent months.
- **6.** The WorkForm will calculate the Loss Factor based on the data in Notes 2 and 4. The calculated loss factor should not be significantly different from the approved loss factor for that particular year. If it is, an explanation should be provided.

#### Description of Columns in the table:

- Column F The consumption column is for monthly non-RPP Class B kWh consumption billed (including losses). Total annual consumption is expected to differ from the Consumption Data Table (Note 2) by the loss factor. Utilities are expected to ensure that the difference in consumption between that in column F and the Consumption Data Table are reasonable.
- Column G Prior month's consumption billed in the current month to be deducted.

  Note that not all monthly non-RPP Class B unbilled consumption may be readily available. Some estimates or allocations may be required to determine a portion of this data.
- Column H Current month's consumption that was billed in a subsequent month is to be added. Note that not all monthly non-RPP Class B unbilled consumption may be readily available. Some estimates or allocations may be required to determine a portion of this data.
- Column J GA rates billed to customers will be auto-populated once the distributor selects the billed rate in Step 3 above.
- Column L The Actual GA rates billed by the IESO will be auto-populated.

#### 7. Note 5: Reconciling Items

The purpose of this section is to reconcile the difference between:

- the expected net transactions for the year calculated in the WorkForm for Account 1589, and
- ii. the net transactions recorded in the distributor's General Ledger.

Reconciling items will be considered for each year requested for disposition.

a) Input the Net Change in Principal Balance in the GL:
 This should equal the GA flow-through transactions recorded in Account 1589 for the year. [N.B.: Please do not include dispositions in this number]

#### Reconciling items:

#### 1a. True-up of GA Charges based on Actual Non-RPP Volumes – prior year:

True up of prior year non-RPP consumption impacting Account 1589 are to be shown as reconciling items and are to be determined as follows (assuming that the impact of prior year true-ups was not recorded in the GL until the current year):

- The monthly GA costs that would have been recorded in the General Ledger would have been initially accrued per Charge Type 148 Global Adjustment from the IESO bill, and based on estimated Class B non-RPP customer kWh volumes multiplied by the IESO actual GA price per kWh for that particular month.
- The reconciling item relating to the prior year's true up for Account 1589 would be calculated as the difference between i) the actual Class B non-RPP volumes for the prior year (determined in the current year) multiplied by the IESO Actual GA Rate per kWh, and ii) the estimated Class B non-RPP volumes from the prior year multiplied by the IESO Actual GA Rate per kWh.

**NB**: there may be multiple amounts included in this reconciling item depending

on how many months of true-ups were not reflected in the General Ledger balance of Account 1589 as of December 31, 2017.

#### Example:

Balances for disposition are as of December 31, 2018 (also referred to as "current year")

Data used in true-up of Class B Non-RPP volumes for December 2017:

- o Estimated Class B non-RPP volumes 275,000,000 kWh
- o Actual Class B non-RPP volumes 296,759,443 kWh
- IESO Global Adjustment Actual Rate \$0.1000/kWh

The estimate of GA costs for non-RPP Class B customers for December 2017 would have been \$27,500,000. The actual GA cost for non-RPP Class B customers for December 2017 was \$29,675,944. If the true-up was not reflected in the 2017 General Ledger, \$2,175,944 should be added as an true-up reconciling adjustment for in the 2017 GA Analysis WorkForm. In addition, \$2,175,944 should be included as a principal adjustment to the 2017 DVA Continuity Schedule of the Cost of Service or IRM rate application.

In the 2018 GA Analysis WorkForm, the \$2,175,944 adjustment would have to be reversed and shown as (\$2,175,944).

### 1b. True-up of GA Charges based on Actual Non-RPP Volumes – current year (i.e. 2018):

Current year true-up of Class B Non-RPP GA volumes impacting Account 1589 are to be shown as reconciling items and are to be determined as follows (assuming that the impact of true-ups was not recorded in the GL until the following calendar year, (i.e. 2019 in this example):

- The GA costs in the General Ledger would have been initially recorded per Charge Type 148 Global Adjustment from the IESO bill, and based on initially estimated Class B non-RPP customer kWh volumes multiplied by the IESO actual GA price per kWh for the month.
- The reconciling item relating to the current year's (i.e. 2018) true up for Account 1589 would be calculated as the difference between i) the actual

Class B non-RPP volumes for the current year (determined in the subsequent year, i.e. 2019) multiplied by the IESO Actual GA Rate per kWh, and ii) the estimated Class B non-RPP volumes for the current year multiplied by the IESO Actual GA Rate per kWh.

**NB:** there may be multiple amounts included in this reconciling item depending on how many months of true-ups of volumes were not reflected in the General Ledger balance of Account 1589 as of December 31, 2018.

#### Example:

Data used in the accrual of GA costs for December 2018:

- Estimated Class B non-RPP volumes 263,000,000 kWh
- Actual Class B non-RPP volumes 277,345,455 kWh
- o IESO Global Adjustment Actual Rate \$0.1100/kWh

The estimated GA costs for non-RPP Class B customers for December 2018 would have been \$28,930,000. The actual GA cost for non-RPP Class B customers for December 2018 was \$30,508,000. If the true-up claim was not reflected in the 2018 General Ledger, \$1,578,000 should be added as a true-up reconciling adjustment for 2018 in the GA Analysis WorkForm. In addition, \$1,578,000 should be included as a principal adjustment to the 2018 DVA Continuity Schedule of the Cost of Service or IRM rate application.

In the next year's (i.e. 2019) GA Analysis WorkForm, the \$1,578,000 adjustment should be reversed and shown as (\$1,578,000).

#### 2. Removal of unbilled to actual revenue differences:

- Distributors are required to follow accrual accounting for transaction recording and financial statement preparation. Revenue accrual accounting is performed by recording unbilled revenue for the electricity consumed by customers that they will eventually be billed for to the end of the reporting period. Unbilled revenue must be accrued for all components of a customer's bill that will be invoiced in the future to the end of the reporting period.
- Unbilled revenue must be based on best data available to ensure accurate data on the distributor's balance sheet and income statement. Generally speaking, accurate data includes kWh consumption volumes & kW

demand volumes by customer and customer class using the billing rates for all items that will appear on the customer's bill.

- Although unbilled revenue is an estimate, the OEB expects it to be relatively accurate. Differences between unbilled revenue accruals for a given previous fiscal year should not be significantly different from the amounts billed to customers in the subsequent year that relate to the previous fiscal year.
- Distributors are to record the differences between i) unbilled revenue for the GA for all customer classes and ii) the GA revenue billed in the subsequent year for the previous fiscal period.
- Distributors should have an approach to accurately calculate such differences and record these amounts in the GA Analysis WorkForm.

Analyses may have to be performed to identify the portion of the billed amounts that corresponded to the amount that was unbilled and recorded in the General Ledger.

#### 2a. Remove Prior year-end unbilled to actual revenue differences:

The differences between prior year-end unbilled revenue and the associated billed revenue is to be identified and adjusted.

#### Example:

Data used to calculate the difference between in unbilled revenue for 2017 and billed revenue in 2018 relating to 2017 fiscal year (assuming the distributor records unbilled revenue using the GA 1st Estimate Rate):

	November 2017	December 2017
Estimated unbilled Class B Non-	5,750,000 kWh	335,000,000 kWh
RPP kWh as at Dec. 31, 2017		
Billed Class B non-RPP kwh	4,225,750 kWh	329,650,550 kWh
(billed in 2018)		
IESO Global Adjustment 1st	\$0.1230/kWh	\$0.0975/kWh
Estimate Rate		

- The unbilled revenue accrual for Class B non-RPP customers at the end of 2017 was: \$33,369,750 = [\$32,662,500 = (335,000,000 X \$0.0975/kWh)] + [\$707,250 = (5,750,000 X \$0.1230/kWh)]
- The amount of GA billed in 2018 related to 2017 for non-RPP Class B customers was \$32,660,696 =[\$32,140,929 =329,650,550 X \$0.0975/kWh)] + [\$519,767 = (4,225,750 X \$0.1230/kWh)].
- The difference between unbilled revenue and billed revenue is \$709,054.

2017 unbilled revenue was overstated in this example. A debit adjustment of \$709,054 for this reconciling item should be made in the 2017 GA Analysis WorkForm. \$709,054 should be included as a principal adjustment to the 2017 DVA Continuity Schedule of the Cost of Service or IRM rate application.

In the 2018 GA Analysis Workform, the \$709,054 adjustment would have to be reversed and shown as (\$709,054).

#### 2b. Add current year-end (i.e. 2018) unbilled to actual revenue differences:

The difference between current year-end unbilled revenue and the associated billed revenue is to be identified and adjusted.

#### Example:

Data used to calculate the difference between in unbilled revenue for 2018 and billed revenue in 2019 relating to 2018 fiscal year (assuming the distributor records unbilled revenue using the GA 1st Estimate Rate):

	November 2018	December 2018
Estimated unbilled Class B Non-	7,750,000 kWh	348,000,000 kWh
RPP kWh as at Dec. 31, 2018		
Billed Class B non-RPP kwh	6,500,000 kWh	335,750,750 kWh
(billed in 2019)		
IESO Global Adjustment 1st	0.1185/kWh	\$0.1075/kWh
Estimate Rate		

o The unbilled revenue accrual for Class B Non-RPP customers at the end of 2018 was  $$38,328,375 = [\$37,410,000 = (348,000,000 \times \$0.1075/kWh)] + [\$918,375 = (7,750,000 \times \$0.1185/kWh)]$ 

- The amount of GA billed in 2019 related to 2018 for non-RPP Class B customers was \$36,863,527 = [\$36,093,206 = 335,750,750 X \$0.1075/kWh)]
   + [\$770,250 = (6,500,000 X \$0.1185/kWh)].
- The difference between unbilled revenue and billed revenue is \$1,464,919.

2018 unbilled revenue was overstated in this example. A debit adjustment of \$1,464,919 for this reconciling item should be made in the 2018 GA Analysis WorkForm. \$1,464,919 would be included as a principal adjustment to the 2018 DVA Continuity Schedule in the Cost of Service or IRM rate application. In the next year's GA Analysis Workform, the \$1,464,848 adjustment would have to be reversed and shown as (\$1,464,848).

### 3. Removal of difference between accrual/forecast and actual relating to load transfers:

- Amounts pertaining to load transfers may be unknown at the end of the year and therefore, are accrued based on an estimate. A true-up to actuals would then be done in the following year.
   NB: Per the December 21, 2015 Distribution System Code Amendment, all load transfer arrangements shall be eliminated by transferring the load transfer customers to the physical distributor by June 21, 2017.
- This adjustment relates to long term and short-term load transfers as applicable. A distributor could have differences between accrued and actual cost as the geographic distributor or differences between accrued and billed revenue as the physical distributor. The examples are based on differences between accrued and billed revenue as physical distributor.

### 3a. Remove difference between prior year accrual/forecast and actual relating to load transfers:

#### Example:

Information related to load transfer revenue differences for December 2017:

Actual geographic distributor's volumes used to calculate the difference between load transfer revenue for 2017 and billed revenue in 2018 relating to 2017 fiscal year:

2017 accrued unbilled quantities

- 2,500,000 kWhs

2018 billed quantities for 2017

- 3,600,000 kWhs
- o IESO Global Adjustment weighted average 2017 Actual rate \$0.1250/kWh

The accrued unbilled revenue amount related to geographic distributors was \$312,500 and the amount of GA billed to geographic distributors in 2018 related to 2017 was \$450,000. 2017 accrued revenue was \$137,500 lower than billed revenue in 2018 relating to 2017 fiscal year.

As the 2017 accrued unbilled revenue was lower than billed revenue, a credit adjustment of \$137,500 should be made to the 2017 GA Analysis WorkForm for this reconciling item.

In the 2018 GA Analysis WorkForm, the \$137,500 adjustment would have to be reversed and shown as a debit of \$137,500.

### 3b. Add difference between current year accrual/forecast to actual from long term load transfers:

#### Example:

Information related to load transfer revenue differences for December 2018:

Geographic distributor's volumes used to calculate the difference between load transfer revenue for 2018 and billed revenue in 2019 relating to 2018 fiscal year:

2018 accrued quantities

- 3,300,000 kWhs

2019 billed quantities for 2018

- 2,100,000 kWhs
- IESO Global Adjustment weighted average 2018 Actual rate -\$0.1165/kWh

The accrued revenue amount related to geographic distributors was \$384,450 and the amount of GA billed to geographic distributors in 2019 related to 2018 was \$244,650. 2018 accrued revenue was \$139,800 higher than billed revenue in 2019 relating to 2018 fiscal year.

As the 2018 accrued revenue was higher than billed revenue, a debit adjustment of \$139,800 should be made to the 2018 GA Analysis WorkForm for this reconciling item.

In the 2019 GA Analysis WorkForm, the \$139,800 adjustment would have to be reversed and shown as a credit of \$139,800.

#### 4. Remove GA balances pertaining to Class A customers:

- Global Adjustment is billed to Class A customers based on their customerspecific peak demand factor (PDF).
- Class A customers are billed at actual GA costs. Monthly unbilled revenue relating to these customers should be accrued based on the estimated amount accrued for Charge Type 147 as part of a distributor's cost of power accrual for GA. Therefore, there should be no variances related to Class A customers in Account 1589.
- For those distributors that do not follow this accounting month-end practice, they may have balances relating to GA attributable to Class A customers included as part of the balance of Account 1589.
- Any amounts recorded in Account 1589 relating to Class A customers
  must be eliminated, as the balance of Account 1589 should only relate to
  Class B non-RPP customers. Transactions pertaining to Class A
  customers are recorded in Account 1589 RSVA-GA and should net to
  zero. However, there may be balances pertaining to Class A customers
  included in the account at the end of the year due to timing issues. For
  example, a balance pertaining to Class A customers may exist if revenues
  are not accrued on the same basis as expenses.
- A distributor would need to do an analysis of all GA Class A transactions that would have been included in the balance of Account 1589. A distributor would need to compute the adjustment amounts relating to Class A GA by taking the sum of the following:
  - GA billed to Class A customers,
  - GA unbilled revenue accruals recorded relating to Class A customers
  - GA unbilled revenue reversals recorded relating to Class A customers
  - GA charged by the IESO for Charge Type 147
  - GA accrued as part of the cost of power accrual for Charge Type 147

#### Example:

A distributor summed up all transactions relating to Class A customers and erroneously had a credit balance of \$1,750,000. This amount should be eliminated from the GA Analysis WorkForm by recording a debit adjustment of \$1,750,000. This adjustment is a permanent adjustment and is not

reversed.

If any such balances pertaining to Class A customers exist, the distributor must also ensure that these amounts are excluded from the Account 1589 RSVA-GA balance requested for disposition.

#### 5. Significant prior period billing adjustments recorded in current year:

- Cancel and rebills for billing adjustments may be recorded in the current year revenue GL balance but would not be included in the current year consumption charged by the IESO.
- It is a normal part of business for distributors to make billing corrections, bill cancellations, and re-billings. Billing adjustments can be small or quite large, depending on the nature and cause of the billing adjustment.
- Where billing adjustments relate to prior calendar years pertaining to Class B non-RPP customers, there would be an impact to Account 1589.

#### Example:

- A distributor made significant billing adjustments in the current year of \$350,000 related to GA revenue for the prior two years:
- The revenue would have been recorded in the current period General Ledger and current period billing statistics, however,
- The GA costs relating to such revenue would have been paid to the IESO at actual rates in prior periods, i.e.: would not have been recorded as a cost in the current period.
- In this example there is a mismatch of GA revenue and costs, requiring a reconciling item in the GA Analysis WorkForm to explain the difference between the GA balance in the WorkForm and the General Ledger.
- In this case, a debit adjustment would be needed for \$350,000 in the current period GA Analysis Workform to explain the difference between the GA balance in the Workform and the General Ledger. This is a one-time adjustment on the GA Analysis Workform, and a reversal would not be required in future periods. This is **not** a Principal Adjustment item for the DVA Continuity Schedule.

### 6. Differences in GA charged by the IESO relating to prior period(s) or other adjustments:

- Differences between the following would need to be quantified:
  - the GA amount calculated based on the GA IESO actual posted rate X total GA wholesale billing quantities [same concept as with the Analysis of Expected GA Amount (Note 4 in the WorkForm)], and
  - the GA amount that was actually charged by the IESO on the distributor's wholesale power bill Charge Type 148, for Class B non-RPP volumes.
- On occasion, the IESO makes Global Adjustment corrections as the result of distributor corrections to prior fiscal years or adjustments initiated by the IESO for various reasons.
- For example, there may be instances where the IESO bills distributors more/less than GA costs based on actual GA Rate. Distributors should be aware of such differences, which should be identified through a distributor's wholesale settlement processes and systems.
- Any amounts charged by the IESO for GA other than the distributor's wholesale volumes would need to be identified and recorded as a reconciling item in the GA Analysis WorkForm.

#### Example:

- The IESO made adjustments on a distributor's monthly invoices during the year totaling \$425,000 and these adjustments would result in an effective GA rate which is different than the actual posted rate. A distributor would need to record a reconciling item in the GA Analysis WorkForm for this situation.
- The GA costs may have been recorded in the current period General Ledger, however, the additional charge or credit amounts may not have been reflected in the calculation of the expected GA amount in the WorkForm. In this example, there is a mismatch of GA revenue and costs, requiring a reconciling item in the GA Analysis WorkForm to explain the difference between the GA balance in the General Ledger and the GA Analysis Workform.

o In this case, a credit adjustment would be needed for \$425,000 in the current period GA Analysis WorkForm to explain the difference. This is a one-time adjustment on the GA Analysis Workform, and a reversal would not be required in future periods. This is **not** a Principal Adjustment item for the DVA Continuity Schedule.

### 7. Differences between actual system losses and Approved Total Loss Factors (TLF) billed to customers in the calendar year:

 Differences between actual system losses and TLFs billed to customers are not usually significant. However, there may be circumstances that would cause more significant differences. Where significant differences are identified, a reconciling item is required in the GA Analysis WorkForm and a distributor would be required to explain the operational reasons for the large differences.

#### Example:

A distributor calculates the actual system losses to be significantly greater than billed TLF to Class B non-RPP customers, the following data is applicable:

- Total metered volumes billed and unbilled to Class B non-RPP customers was 290,000,000 kWhs
- Actual System Losses relating to Class B non-RPP customers is 5.50%
- Billed TLF relating to Class B non-RPP customers was 4.50%
- The weighted average actual GA rate for the year was \$0.1035/kWh

In this case, the difference between the billed TLF and the actual system losses relating to Class B non-RPP customers is \$300,150.

As the General Ledger in Account 1589 would reflect the actual costs related to the actual system losses, the expected GA costs calculated in the GA Analysis WorkForm would be lower and a credit adjustment of \$300,150 would need to be recorded to in the GA Analysis WorkForm to explain the difference between the GA balance in the GA Analysis WorkForm and the General Ledger. This is a one-time adjustment on the GA Workform, and a reversal would not be required

in future periods. This is **not** a Principal Adjustment item for the DVA Continuity Schedule.

### 8. Any other items that cause differences between the expected GA amount and the GA recorded in the General Ledger

Any remaining unreconciled balance that is greater than +/- 1% of the annual GA payments to the IESO must be analyzed and investigated to identify any additional reconciling items, or to identify corrections to the balance requested for disposition.

In its review of Account 1589, the OEB will utilize any meaningful evidence provided by the distributor that substantiates any unreconciled balance that is greater than +/- 1% of the annual GA payments to the IESO when making a decision to approve or deny disposition of this account.

- 9. For each item under Note 5, indicate which of the amounts are included as "Principal Adjustments" on the DVA Continuity Schedule. Provide an explanation if the "Total Principal Adjustments on DVA Continuity Schedule" under Note 5 do not reconcile to the DVA Continuity Schedule.
- 10. Review Note 6 to ensure that any unresolved difference is within the materiality threshold.

## Appendix A GA Methodology Description Questions on Accounts 1588 & 1589<sup>1</sup>

1. Please complete the Table below for principal adjustments on the DVA Continuity Schedule for Account 1588:

#### Reconciliation of Account 1588 - 2018

		Principal Adjustments	Was the amount a "Principal Adjustment" in the previous year? (Y/N)
	Balance December 31, 2018	(1,566,766)	N
Reve	ersals of Principal Adjustments - previous year		<b>,</b>
1.	Reversal of Cost of Power accrual from previous year		
2.	Reversal of CT 1142 true-up from the previous year		
3.	Unbilled to billed adjustment for previous year		
4.	Reversal of RPP vs. Non-RPP allocation		
	Sub-Total Reversals from previous year (A):	0	
<b>Princ</b> 5. 6.	Cipal Adjustments - current year  Cost of power accrual for 2018 vs Actual per IESO bill  True-up of CT 1142 for 2018 consumption recorded in 2019  GL		
7.	Unbilled accrued vs. billed for 2018 consumption		
8.	True-up of RPP vs. Non-RPP allocation of CT 148 based on actual 2018 consumption		
9.	Other – Reversing Nov & Dec 2017 booked in 2018		
10.	Principal Disposition during 2019 approved by OEB	557,375	N
	Sub-Total Principal Adjustments for 2018 consumption (B)	557,375	
	Total Principal Adjustments shown for 2018 (A + B)	557,375	
Bal.	For Disposition - 1588 (should match Total Claim column on DVA Continuity Schedule	(1,009,391)+(37,395)carrying Charges = (1,046,786) Total Claim Balance	

<sup>&</sup>lt;sup>1</sup>In all references in the questions relating to amounts booked to accounts 1588 and 1589, amounts are not booked directly to accounts USoA 1588 and 1589 relating to power purchase transactions, but are rather booked to the cost of power USoA 4705 Power Purchased, and 4707, Charges – Global Adjustment, respectively. However, accounts 1588 and 1589 are impacted the same way as account 4705 and 4707 are for cost of power transactions.

- 11. In booking expense journal entries for Charge Type (CT) 1142 and CT 148 from the IESO invoice, please confirm which of the following approaches is used:
  - a. CT 1142 is booked into Account 1588. CT 148 is pro-rated based on RPP/non-RPP consumption and then booked into Account 1588 and 1589 respectively.
  - b. CT 148 is booked into Account 1589. The portion of CT 1142 equaling RPP minus HOEP for RPP consumption is booked into Account 1588. The portion of CT 1142 equaling GA RPP is credited into Account 1589.
  - c. If another approach is used, please explain in detail.
  - d. Was the approach described in response to the above questions used consistently for all years for which variances are proposed for disposition? If not, please discuss.

#### Response:

Milton Hydro confirms that the approach set out in b) above is used and has been applied consistently for all years for which variances are proposed for disposition.

#### 12. Questions on CT 1142

- a. Please describe how the initial RPP related GA is determined for settlement forms submitted by day 4 after the month-end (resulting in CT 1142 on the IESO invoice).
- b. Please describe the process for truing up CT 1142 to actual RPP kWh, including which data is used for each TOU/Tier 1&2 prices, as well as the timing of the true up.
- c. Has CT 1142 been trued up for with the IESO for all of 2018?
- d. Which months from 2018 were trued up in 2019?
  - i. Were these true ups recorded in the 2018 or 2019 balance in the General Ledger?
- e. Have all of the 2018 related true-up been reflected in the applicant's DVA Continuity Schedule in this proceeding?

#### Response:

- a) RPP Quantities billed in the month & the corresponding WAHSP is captured within the 4 day window after month end. This average WAHSP for these RPP Quantities plus the current months First Estimate GA Rate is applied to these quantities. The difference between the amount billed (at fixed rate prices) and the WAHSP plus GA rate is one component of Charge Type (CT) 1142. In addition to this amount, the RPP Quantities billed in the previous month are trued up by applying the Actual GA rate that is now available. The difference between the initial amount calculated on the First Estimated and this Actual GA rate along with the currents months calculation makes up Charge Type (CT) 1142.
- b) The RPP Quantities billed in the previous month are trued up by applying the Actual GA rate that is now available. The difference between the initial amount calculated on the First Estimated and this Actual GA rate along with the currents months calculation makes up Charge Type (CT) 1142. This is performed monthly.
- c) Yes CT 1142 is trued up monthly based on the prior months billed quantities and applying the Actual GA rate that is now available
- d) November 2018, December 2018 is trued up in January 2019, February 2019 and a Journal Entry is done to allocate this amount into 2018.
- e) Yes, all the 2018 related true-up been reflected in the applicant's DVA Continuity Schedule in this proceeding

#### 13. Questions on CT 148

- a. Please describe the process for the initial recording of CT 148 in the accounts (i.e. 1588 and 1589).
- b. Please describe the process for true up of the GA related cost to ensure that the amounts reflected in Account 1588 are related to RPP GA costs and amounts in 1589 are related to only non-RPP GA costs.
- c. What data is used to determine the non-RPP kWh volume that is multiplied with the actual GA per kWh rate (based on CT 148) for recording as the initial GA expense in Account 1589?
- d. Does the utility true up the initial recording of CT 148 in Accounts 1588 and 1589 based on estimated RPP/non-RPP consumption proportions to actuals based on actual RPP-non-RPP consumption proportions?
- e. Please indicate which months from 2018 were trued up in 2019 for CT 148 proportions between RPP and non-RPP
  - i. Were these true ups recorded in the 2018 or 2019 balance in the General Ledger?
- f. Are all true-ups for 2018 consumption reflected in the DVA Continuity Schedule?

#### Response:

- a) The amount billed on CT 148 (Class B Global Adjustment Settlement Amount) less the RPP portion calculated on the settlement form 4 days after month end is journalized first into OEB account 4707 global adjustment, then allocated to OEB account 1589 RSVA Global Adjustment.
- b) As stated in Question 1 CT 148 is booked to Account 1589. The portion of CT 1142 equaling the RPP minus the HOEP for RPP consumption is booked into Account 1588. The portion of CT 1142 equaling GA RPP is credited to Account 1589. The RPP true up portion from the prior month is included in these amounts.
- c) The actual global adjustment related to the RPP is calculated based on billed quantities and is then subtracted from the CT 148 to determine the portion belonging to the non-RPP. Billing stat codes are used to verify the non-RPP quantities.

- d) MHDI trues up monthly applying difference between the initial amount calculated on the First Estimate and the Actual GA rate based on the previous months billed consumption proportions for the RPP portion.
- e) November 2018 & December 2018 are trued up in January 2019 & February 2019 for CT148 and accrued for 2018.
- f) Yes, using our current method of truing up all adjustments are included in the DVA Continuity Schedule for 2018.

Note: Milton Hydro's recording of the Global Adjustment and true-ups has consistently resulted in an Unresolved Difference as % of Expected GA Payments to IESO of less than the 1% threshold and therefore meets the GA Model Criteria. The 2018 reconciliation Unresolved Difference as % of Expected GA Payments to IESO is 0.2%.

14. Questions regarding principal adjustments and reversals on the DVA Continuity Schedule:

#### Questions on Principal Adjustments - Accounts 1588 and 1589

- a. Did the applicant have principal adjustments in its 2019 rate proceeding which were approved for disposition?
- b. If yes, please provide a break-down of the total amount of principal adjustments that were approved (e.g. true-up of unbilled, true up of CT 1142, true up of CT 148 etc.) for each of Accounts 1588 and 1589.
- c. Has the applicant reversed the adjustment approved in 2019 rates in its current proposed amount for disposition?

  \*\*Proply the principal adjustments amounts that were disposed in the
  - **NB**: only the principal adjustments amounts that were disposed in the previous proceeding should be reversed in this proceeding. For example, if no amount related to unbilled to billed adjustment for 2018 consumption was included in 2019 proceeding, this amount should <u>not</u> be included as a "reversal" from previous year.
- d. Please confirm that the allocation of charge type 148 has been trued up to actual proportion of RPP/non-RPP consumption in the GL.

#### Response:

- a. No, Milton Hydro did not have principal adjustments in its 2019 rate proceeding which were approved for disposition.
- b. N/A.
- c. N/A.
- d. Milton Hydro confirms that the allocation of charge type 148 has been trued up to actual proportion of RPP/non-RPP consumption in the GL

IRM REQUIREMENTS		Lvidence Reference, Notes
3.2.6 Lost Revenue Adjustment Mechanism Variance Account		n/a
Addendum, Pages 20 - 22	LEXAWN - asposition or Galance. Distributions must provide version 4 of LAMANVA Work Form in a working excell tile when making LRAMIVA requests for remaining amounts related to CFF activity. An application for lost revenues should include: Participation and Cost reports in Excel format, made available by the IESO. An application for lost revenues should also provide the following:  - statement identifying the year(s) of new lost revenues and prior year savings persistence claimed in the LRAMIVA disposition - statement confirming LRAMIVA based on verified savings results supported by the distributors final CDM Report and Persistence Savings Report (both filed in Excel format) and a statement indicating use of most recent input assumptions when calculating lost revenue - summary table with principal and carrying changes by rate class and resulting rate riders - statement providing the disposition period; rationale provided for disposing the balance in the LRAMIVA if one or more classes do not generate significant rate riders - statement confirming LRAMIVA reference amounts, rationale for the distributors circumstances if LRAMIVA threshold not used - rationale confirming how rate class allocations for actual CDM savings were determined by class and program (Tab 3-A of LRAMIVA Work Form) - statement confirming whether additional documentation was provided in support of projects that were not included in distributors final CDM Annual Report (Tab & of LRAMIVA Work Form as applicable) - for a distributor's streetlighting project(s) which may have been completed in collaboration with local municipalities, the following must be provided. Explanation of the methodology to calculate streetlighting savings confirmation whether the streetlighting savings were calculated in accordance with CEE-approved load proflets for streetlighting projects, Confirmation whether the streetlighting savings were calculated in accordance with CEE-approved load proflets for streetlighting projects, Confirmation whether the streetlighting savi	
2277	o Confirmation that the distributor has received reports from the participating municipality that validate the number and type of bulbs replaced or retrofitted through the IESO program.	
3.2.7 Tax Changes 19 & 20	If applicable, tabs 8 and 9 of Rate Generator Model complete	
20	If one or more customer classes does not generate a rate rider to the fourth decimal place, a proposal that the entire 50/50 sharing	n/a
3.2.8 Z-Factor Claims, Pg. 20-21	amount will be transferred to Account 1595 for disposition at a future date	n/a
20	Evidence that costs incurred meet criteria of need, materiality and prudence - see 3rd Generation IRM Report	
20 & 21	In addition distributor must:  Notify OEB by letter of all Z-Factor events within 6 months of event (Confirm that letter is on file)  Apply to DEB for any cost recovery of amounts in OEB-approved deferral account claimed under Z-Factor treatment  Demonstrate that distributor could not have been able to plan or budget for the event and harm caused is genuinely incremental  Demonstrate that costs incurred within a 12-month period and are incremental to those already being recovered in rates as part of ongoing business exposure risk	
3.2.8.2 Z-Factor Accounting Treatment		n/a
21	Eligible Z-factor cost amounts recorded in Account 1572, Extraordinary Event Costs, of the OEB's USoA contained in the Accounting Procedures Handbook (APH) for electricity distributors.	
21	Carrying charges are calculated using simple interest applied to the monthly opening balances in the account and recorded in a separate Sub-Account of this account	
3.2.8.3 Recovery of Z-Factor Costs		n/a
21	Description of manner in which distributor intends to allocate incremental costs, including rationale for approach and merits of alternative allocation methods	
21	Specification of whether rate rider(s) will apply on fixed or variable basis, or combination; length of disposition period and rational for proposal	
21	Residential rider on fixed basis	
21	Detailed calculation of incremental revenue requirement and resulting rate rider(s)	
3.3.1 Advanced Capital Module, Pg. 22-23		n/a
22	Evidence of passing "Means Test"  Information on relevant project or projects updated cost projections, confirmation that the project or projects are on schedule to be	
22/23	completed as planned and an updated ACM/ICM module in Excel format  If proposed recovery differs significantly from pre-approved amount, a detailed explanation is required as to why	
23	If updated cost projects are 30% greater than pre-approved amount, distributor must treat project as new ICM, re-filed business case	
3.3.2 Incremental Capital Module, Pg. 23-29	and other relevant material required	n/a
3.3.2.1 ICM Filing Requirements		n/a
	The following should be provided when filing for incremental capital:	
25	An analysis demonstrating that the materiality threshold test has been met and that the amounts will have a significant influence on the operation of the distributor	
25	Justification that the amounts to be incurred will be prudent - amounts represents the most cost-effective option (but not necessarily the least initial cost) for ratepayers	
25	Justification that amounts being sought are directly related to the cause, which must be clearly outside of the base upon which current rates were derived	
25	Evidence that the incremental revenue requested will not be recovered through other means (e.g., it is not, in full or in part, included	
25	in base rates or being funded by the expansion of service to include new customers and other load growth)  Details by project for the proposed capital spending plan for the expected in-service year	
25	Description of the proposed capital projects and expected in-service dates	
25	Calculation of the revenue requirement (i.e. the cost of capital, depreciation, and PILs) associated with each proposed incremental capital project	
25	Calculation of each incremental project's revenue requirements that will be offset by revenue generated through other means (e.g. customer contributions in aid of construction)	
25	Description of the actions the distributor would take in the event that the OEB does not approve the application	
25	Calculation of a rate rider to recover the incremental revenue from each applicable customer class. The distributor must identify and provide a rationale for its proposed rider design, whether variable, fixed or a combination of fixed and variable riders. As discussed at	
3.3.5 Off-Ramps	section 3.2.3, any new rate rider for the residential class must be applied on a fixed basis	n/a
3.5.5 On-Kamps	A distributor whose earnings are in excess of the dead band (i.e. 300 basis points) but nevertheless applies for an increase to its	
Appendix A	base rates - an explanation to substantiate its reasons for doing so required	
Appendix A	Confirm disposition of residual balances for vintage Account 1595 have only been done once - distributors expected to seek disposition of the balance a year after a rate rider's sunset date has expired. No further dispositions of these accounts are generally expected unless justified by the distributor.	Not Disposoing of Def/Var balances
Appendix A & Addendum, Page 22	Distributors who meet the requirements for disposition of residual balances of Account 1595 sub-accounts, must complete the 1595 Analysis Worldorm. Account 1595 sub-accounts are eligible for disposition when one full year has elapsed since the associated rate riders' sunset dates have expired and the residual balances have been externally audited.	n/a
Appendix A	Material residual balances will require further analysis, consisting of separating the components of the residual balances by each applicable rate rider and by customer rate class. Distributors are expected to provide detailed explanations for any significant residual balances attributable to specific rate riders for each customer rate class. Explanations must include for example, volume differences between forecast volumes (used to calculate the rate riders) as compared to actual volumes at which the rate riders were billed.	n/a
